

# How To Migrate SoftNAS Cloud<sup>®</sup> Instances

## Symptoms:

If your instance of SoftNAS has not received the latest updates and features, or changes to our documentation do not reflect what you see in your console, it may be time to migrate your SoftNAS instance to the latest version. Direct upgrade to the latest SoftNAS version is only supported for users with SoftNAS version 3.4.9 and above. If on an older version, the below migration options may be required.

**Note:** SoftNAS recommends a reboot of your system be performed prior to performing a system upgrade or migration. This ensures that the upgrade/migration is performed on a stable system.

## Purpose

Here you will find links to articles covering the best possible migration path for your personal situation. Review the options below, and select the one that applies to you.
